SMK TARUNA BHAKTI DEPOK

Jl. Pekapuran SMK Taruna Bakti No.66, RT.2/RW.7

Preface

Praise and gratitude always we to pray for the presence of Allah SWT for his favors and gifts we can complete industrial visit.

We realize that the report industrial visit that we have made is still far from perfect in terms of its preparation, language, and writing.

Therefore, we really hope for constructive criticism and suggestions from all readers to be a reference so we can become even better in the future.

We hope that this module can be used as a learning resource and can understand what is meant. Hopefully this activity report adds insight and benefits for readers.

We would like to thank all parties for all forms of assistance that have been given and hopefully get a reward and mercy from Allah SWT.

Depok, August 5th 2021

DAC Audit Management System (AMS-DAC) is an Information System aimed at regulating the Group Internal Audit Process (GIA). This system also connects the Auditor as the executor and Management as the auditor's supervisor. AMS-DAC was developed based on web

Audit Management System-DAC (AMS-DAC) is an Information System that aims to regulate the Internal Audit Group Process Audit (GIA). This system is also tasked with bridging the Auditor as the executor and Management as the auditor's supervisor. AMS-DAC was developed in a web-based.

AMS-DAC has five main areas related to the Audit Process method, namely; Back Office, Target & Resourcing, Execution, Reporting and Knowledge Management. Each main menu has sub menus in it.

PT DAC-SOLUTION INFORMATIKA was established in May 2008 on Jl. Karet Hijau No.52, Beji, Kecamatan Beji, Kota Depok, Jawa Barat 16422.

Vision and Mission
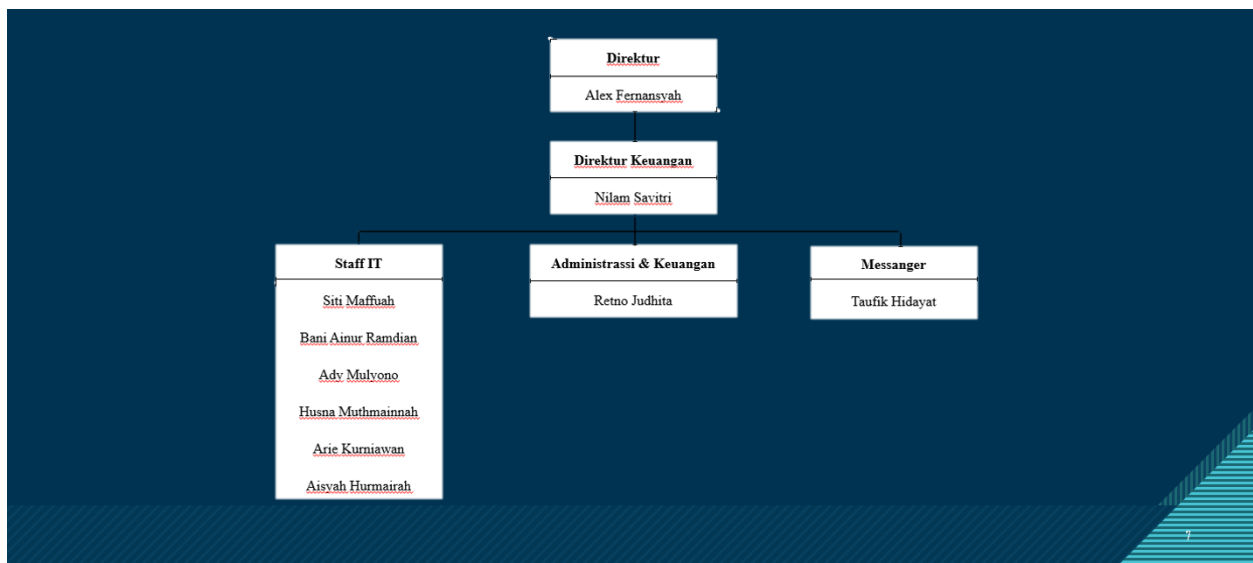

Vision :

As an Information Technology consulting company, offering solutions that are appropriate by providing appropriate, effective and efficient solutions.

Missions :

We believe that the performance of an organization or company can be improved by using appropriate work tools and a neat work system (procedure). The key word is "in accordance", in the sense that the work tools provided must be the most sophisticated by including all the features that are available and the price is expensive, but more than finding an optimal solution where the solution is appropriate to the needs, work environment and ability of the organization or company.
